Don't Want a Total Knee? Read On.

By Thomas J. Haverbush, M.D.
Orthopaedic Surgeon

Transforming patient information into patient understanding.

I rarely (probably never) walk into an exam room and after introductions the patient says, "Doctor, I have knee arthritis. Will you please do a Total Knee Replacement?"

Simply because I am able to do a Total Knee Replacement doesn't mean the patient wants it. They usually don't want to hear it is their only option either.

Key Point: My place is to give them the best information about treatment that applies to their particular knee problem. Then the person and often their family have to decide.

Knee Replacement

The number of total knee replacements has increased in recent years and is expected to continue. Knee problems seem to be epidemic. They are caused by trauma, sports injuries and osteoarthritis that in some people "just happens".

If the knee problem is far advanced, there may be no other reasonable solution but Total Knee Replacement.

OK, What Else?

The Arthritis Foundation guidelines are something patients and physicians ought to accept. What are the choices for treatment less invasive than total knee replacement?

Ok, here goes. Gospel from the Arthritis Foundation.

- Lose Weight

It is the only thing that actually slows down the progress of arthritis. The only one. Every pound lost greatly decreases stress and pressure on the bone and tissue in and around the knee. Very hard for most of us to do, but I have seen it work over and over again. Wouldn't you rather try to lose weight, than to have a total knee?

- Exercise

Walk, ride a bike, swim, almost anything that is low impact and gets you moving. For the great majority of knee arthritis patients exercise helps decrease pain and is, of course good for overall health. For a few patients, this does not work for them.

- Increase Muscle

Stronger muscles help support and relieve pain in damaged joints. It's like having a brace inside your leg. Strengthening

muscles must be done correctly if it is to help. A Physical Therapist or I have to show you the correct exercises to do for your problem.

- Possible Help

Supartz pain relieving lubrication medication has been used with success in my office for years.

Osteo-Bi-Flex (Glucosamine/Chondroitin) can, I believe, help some patients, but not all. Best if I help you decide so you don't waste your money.

Braces: maybe, but most people don't continue wearing them.

Acupuncture: worth a try if you want to.

Cane: Definitely if you're not too proud.

Motrin, Advil or similar for pain and inflammation.

Tylenol: for pain only, but don't take to excess.

Well, there you have it. You might require a total knee replacement, which I can do for you, but I am willing to work with you on other possibilities.

Argus Orthopaedic Zone Archive and Office Website

The office website www.orthopodsurgeon.com and the Argus Orthopaedic Zone archive are your window to the Orthopaedic world! www.orthopodsurgeon.com contains

- The Website Library of Information
- Your Orthopaedic Connection
- Argus Orthopaedic Zone Archive

I urge you to log onto the website and check it all out. You will be amazed at all the useful information it contains.

The Argus Orthopaedic Zone archive contains the complete text of every article I have ever written for Shepherd Argus. Please check it out for interesting articles you may have missed.

I very much appreciate all of you loyal readers, patients and future patients. I am here for you in the office, in Argus Orthopaedic Zone and on the office website.

All of the information pertains to everything I treat in the office and hospital.

Our goal is simple - To help people return to more pain free, functional lives. I specialize in you.

Good health. Good life. All the best to you.

Be well.

Dr. Haverbush
